

The New York Time

IS LADY DIANA ALIVE?

Spotted, Lady Diana alive in a little city of England. No need for tissues for Lady Diana' fanatics: she is alive.

Indeed, Lady Diana was seen on 24 December 2022 in the small town of Stamford in Lincolnshire, England by paparazzi. Lady Diana appeared to have gone to a megastore to do her Christmas shopping. She was wearing a purple sweater with the "northwestern" sign design, as well as a white cycling shorts. She was also wearing black glasses so that she might not be recognised. One thing that will never change with Diana is her haircut. That is how the

paparazzi identified her.

Oddly enough, the first time Lady Diana appears on camera is after the Queen's death. Which is kind of dodgy..

First of all, she decided to move to another city to be isolated from the Royal family. The reason why Lady Diana did not appear on camera anymore is because she wanted to leave this world and this type of life. This could explain why she had a car accident? Why did the taxi driver start speeding up? Why did the journey to the hospital take so long? Or, furthermore, why was the funeral done as quickly, and why did a car leave just before the burial?

Moreover, a private investigator was hired and found confidential documents concerning the death of Lady Diana. In the latter, the investigator discovered a contract signed by Lady Diana and the Royal family, setting that Diana would never appear again, in exchange, the family would keep her "death" a secret.

Now that her secret is out and Queen II is dead, will Lady Diana fight for her place ?
